

Anaplan for Medical Devices

Navigating Complexity with Unmatched Flexibility

In the fragmented world of medical device manufacturing, where diverse product lines and complex regulatory requirements converge, Anaplan brings flexibility and integration. Our platform is designed to navigate through the myriad of challenges, from managing multifaceted supply chains to aligning with stringent compliance standards, all while maintaining operational excellence.

Fragmented Source System Integration

Medical device organizations often operate within a highly fragmented IT landscape. This fragmentation leads to challenges such as suboptimal inventory management, inefficient capacity utilization, and a lack of comprehensive global demand insights. Anaplan addresses these issues by 'connecting the dots,' integrating diverse systems to provide a unified platform that enhances visibility, optimizes inventory, and more across the entire planning process.

Adaptability and Process Flexibility

The medical device industry is characterized by a wide variety of products and customer segments, each demanding unique operational approaches. Traditional, rigid planning solutions often struggle to meet these diverse requirements. Anaplan, however, offers a flexible platform that balances best-practice capabilities with the ability to customize models to specific needs.

Autonomy in Production Planning

The true value of planning solutions is in optimizing inventory and ensuring global supply chain visibility. Anaplan empowers organizations to focus on these high-impact areas, such as Demand Planning (DP), Rough Cut Capacity Planning (RCCP), and Integrated Business Planning (IBP), enabling more autonomous and effective planning processes that align with the unique dynamics of the medical device sector.

Collaborative Innovation and Development

Effective planning in medical device organizations requires seamless cross-functional collaboration, involving stakeholders from sales, marketing, supply chain, regulatory and finance. Anaplan facilitates this collaboration by providing a platform that integrates diverse perspectives and data points, enabling teams to work together more effectively.

Some results we were able to achieve with customers of ours:

- **75% reduction in planning cycle time** increases product availability and improves profitability
- **Forecast accuracy improvements of 5 to 25 percentage points**
- **Single source of truth** for sales, operations, and finance creates trust throughout the company

Discover how Anaplan can transform the complexity of your medical device operations into a strategic advantage. **Contact us to learn more about our platform's capabilities and how we can customize a solution for your unique challenges.**
